

CLAIMS

- 1           1.     A method for reading data in a burst from a memory to a PCI master in response to a burst
- 2     read access by said PCI master, said burst read access identifying a starting address in a line Ln of said
- 3     memory, in a system which includes a CPU having a first level cache, comprising the steps of:
- 4           reading data from said memory according to said burst read access; and
- 5           simultaneously performing an inquiry cycle of line Ln+1 in said first level cache.
